Your Hackathon's Web Database

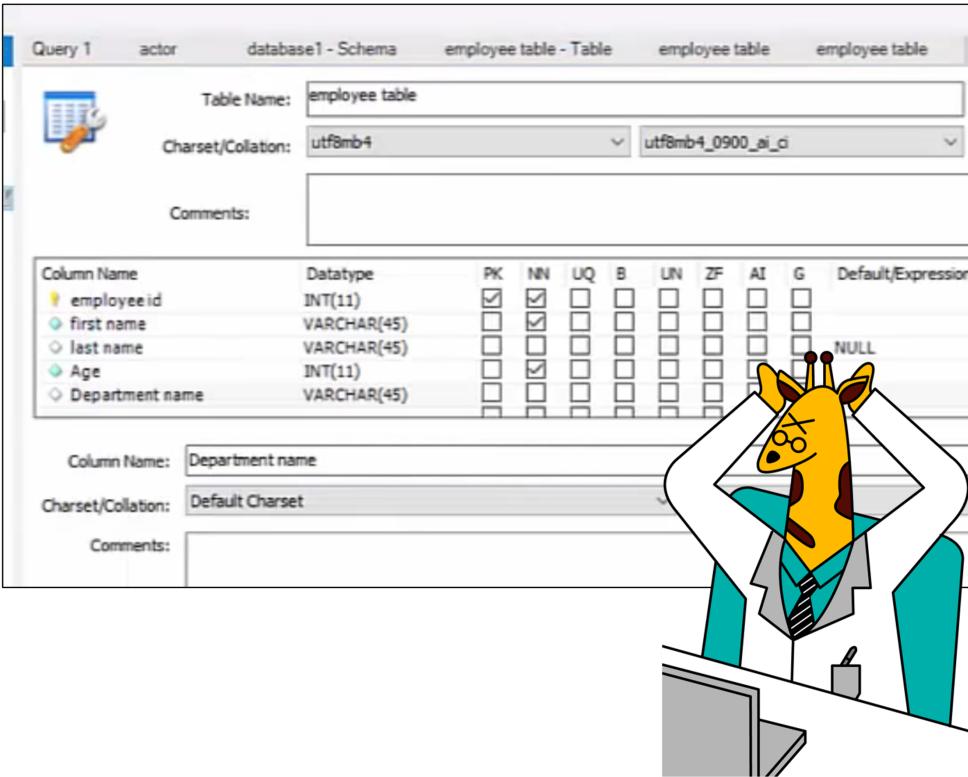

Use Kintone to
store incoming data or
manage outgoing data! ☈

Kintone allows you to
build **Web Databases**
quickly & easily! 🔐

Traditional Databases

Needs **high-level understanding** of databases

Servers need to be **constantly running** & maintained to be accessed

Kintone Databases 😊

Databases are created with
intuitive **drag-&-drop** GUI

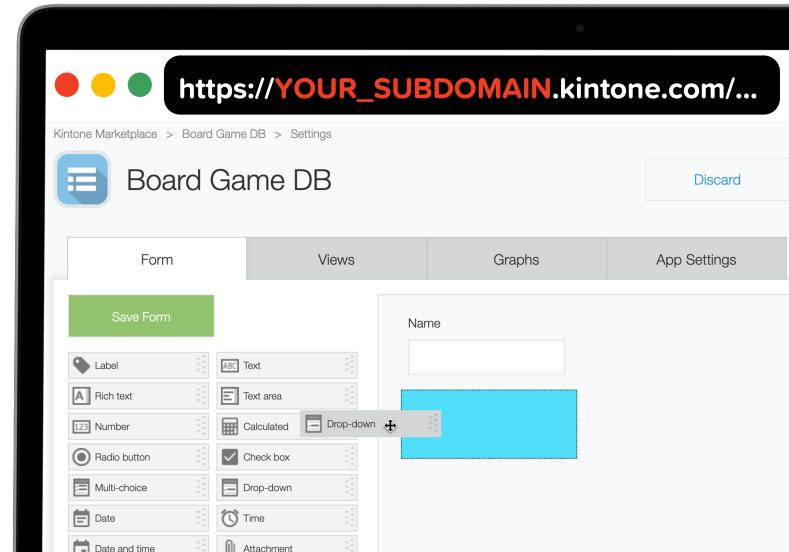

No servers need to be set up
by the user

The screenshot shows the Kintone 'Sales & Leads' application. At the top, there's a navigation bar with 'Sales & Leads > Settings'. On the right, it says 'Last Updated: 1 Mary Simpson 12:10 AM' with 'Discard Changes' and 'Update App' buttons. Below the navigation is a toolbar with 'Form', 'Views', 'Graphs', and 'App Settings'. A 'Save Form' button is visible. To the left is a sidebar with various field types: Label, Rich text, Number, Radio button, Multi-choice, Date, Date and time, Link, Department selection, Related records, Blank space, Field group, Record number, Created datetime, and Updated datetime. To the right is a 'Leads & Sales' form. It includes fields for 'Lead Title' and 'Sales Representative', a 'Contact Info' section with 'Company Name' and 'Website' (with a lookup/clear button), 'Contact Name' and 'Job Title', 'Email' and 'Telephone Number', and a 'Product' section with columns for 'Product Name', 'Product ID', 'Unit Price', and 'Quantity'.

Access Kintone DBs via the Browser

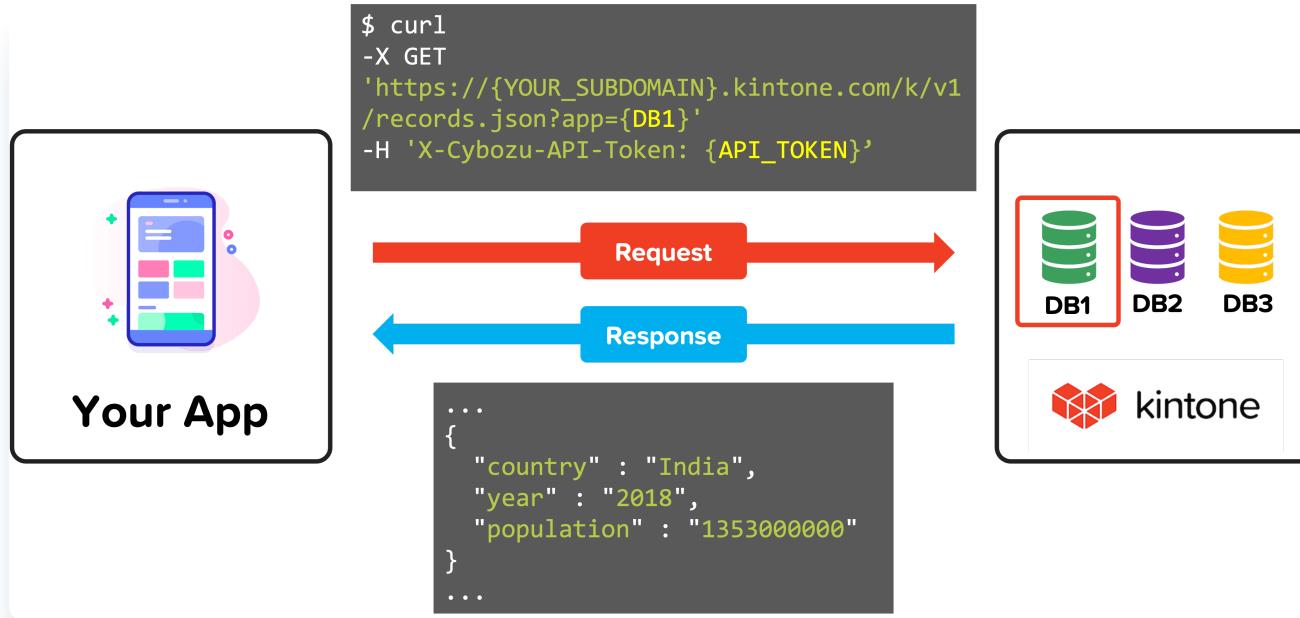

Use the GUI to:

- Create Databases 
- View / Add / Edit Records 
- Update Database schema 
- Upload JS Customizations 

Access Kintone DBs via REST API
